Description : Owner of restaurant of FCAI

Title : Engzny

project idea : mobile application help student order their foods and drinks to save their time

Overview of the required software :

After sitting with the employer and knowing the problems he encounters at work

We found that the biggest problems are overcrowding in the restaurant and inside the cafeteria

After analyzing the problem, we came up with building a program that handles this problem and saves time for students, especially those who do not have enough time between lectures.

The idea of the program comes after signing up to it through the college ID and personal card and logging in, and the program allows him to order what he wants from the cafeteria and determines approximately the time of receipt and thus we eliminate the crowding crisis and increase the cafeteria profits

List of requirements :

1 - register page

- ID of computers and artificial intelligence
- Password
- Confirm password

2 - login page

- ID
- PASSWORD

3 – Homepage

- Foods & drinks
- Prices
- Quantity
